

## THE LEAFIER KALE

### BENEFITS

- ▶ Consistently highest leaf to stem ratio (more leaf area, and less stem) – feed quality is in the leaf, not stems of kale
- ▶ High in leaf Dry Matter content
- ▶ High in ME and digestibility
- ▶ High yielding
- ▶ Very good winter hardiness and snow-loading ability
- ▶ Medium stem – suitable for sheep and cattle (multi-purpose)
- ▶ Available in 25kg packs

### DESCRIPTION

A diploid kale, Coleor is a high yielding, very leafy, purplish variety of medium height, with very high leaf to stem ratio (60+%), finer 'branches' and high leaf dry matter content. Coleor has high dry matter digestibility and ME content which means potentially higher livestock performance. It has very good winter hardiness, and very good snow loading ability (less likely to fall over when covered with snow).

### SUITABILITY / USE

Being a medium stem kale, Coleor is suited to both cattle, sheep and deer as a high yielding winter feed crop. Highly recommended in cooler regions of the country due to its very good winter hardiness; particularly where snow falls are an issue. Sown in November, December as a winter feed crop.

AGRONOMIC TRAITS				
STEM HEIGHT	LEAF : STEM RATIO	SOWING RATE (kgs/ha)	SOWING DEPTH (mm)	SOWING DATE
MEDIUM	VERY HIGH	4-5	10-20	NOV-DEC

### PERFORMANCE

Coleor is a consistently high yielder, with highest leaf to stem ratios, and high ME content.
