

FRENZY

HYBRID RYEGRASS

Frenzy is a new, very high yielding tetraploid hybrid (short rotation) ryegrass. Frenzy is extremely fast establishing with strong cool season growth and year-round yields.

Its unrivalled establishment makes it ideally suited for oversowing into old or run-out pastures or for use as a short term (2-3 years) specialist pasture.

Agronomic traits

- **Ploidy:** Tetraploid
- **Heading date:** Late
- **Persistence (years):** 2-3+ *
- **Rust resistance:** 9 **
- **Minimum rainfall (mms):** 600+ or irrigation
- **Sowing rate (kg/ha):** Pure Sward: 25-30
Over-sowing 15-20

* Subject to management and climatic conditions

** 1= Susceptible 9 = Resistant

Beef

Sheep

FRENZY

HYBRID RYEGRASS

BENEFITS

- › An outstanding 2-3 year short rotation ryegrass
- › Unrivalled speed of establishment compared to other cultivars trialled
- › Improved year-round yields with very strong autumn-winter growth
- › Ideally suited for over-sowing into old or run-out pastures.
- › Very good persistence and palatability
- › Excellent livestock performance potential
- › Suitable for silage and hay
