

# GERONIMO

## FODDER BEET

Geronimo is a thoroughly proven and consistently high yielding mono-germ fodder beet that sits approximately 50% above the ground. With a dry matter content of 16-18%, Geronimo has a yellow-orange tankard shaped bulb, and has very good tolerance to the diseases rhizomania, ramularia and some forms of mildew. The crop can be grazed in-situ, or lifted and fed whole or chopped.

Consistently high  
performing year after year

### Agronomic traits

- Sowing season: Spring
- Sowing rate (seeds/ha): 80,000 - 100,000
- Maturity days to graze: 200 +
- Bulb percentage above ground: +/- 50%
- Dry matter percentage: 16-18%
- Bolting tolerance: very good \*
- Disease tolerance: very good \*

\* Subject to management and climatic conditions

### Animal safety

Recommended for:

Dairy

Beef

Sheep

# GERONIMO

## FODDER BEET

### BENEFITS

- › Reliable even germination
- › Large top growth with excellent green leaf retention late into season
- › Very good bolting tolerance
- › Suitable for sheep, cattle and deer for grazing in-situ or lifted and fed out later
- › Seed is pelletised with world leading technology and coated with insecticide and/or fungicide-only options
- › Available in handy 50,000 seed boxes
