

Exclusive to Notman Pasture Seeds

# RAMPAGE

## ANNUAL RYEGRASS

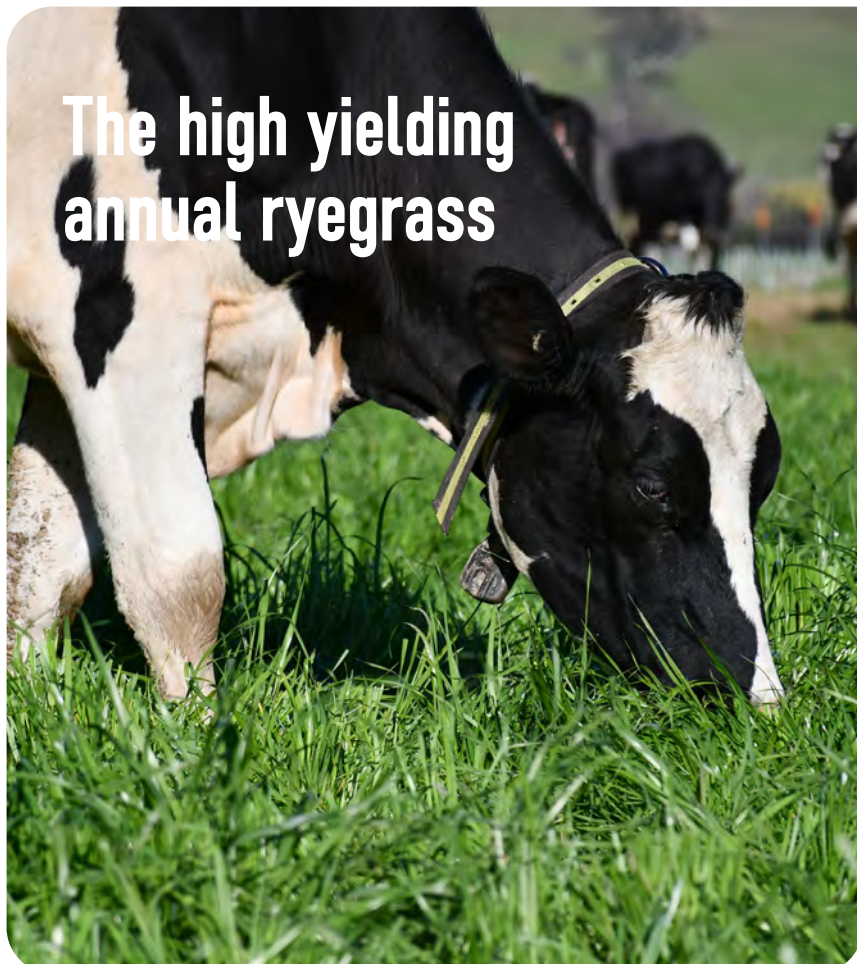

Rampage is Cropmark's newest tetraploid annual ryegrass. It is the highest yielding annual ryegrass in the National Forage Variety Trials® with exceptional yield across all seasons.

Rampage has extremely fast establishment, with strong winter, early spring production, rapid re-growth after grazing and an ability to maintain high productivity and persistence into summer.

Rampage is late heading with low aftermath heading, strong disease resistance, high forage quality and has very good animal palatability. It is an ideal winter feed and break crop after maize and is suitable for all livestock types.

The high yielding  
annual ryegrass

### Agronomic traits

- Ploidy: Tetraploid
- Persistence (months): 8-10\*
- Heading date: Late
- Rust resistance: 9\*\*
- Winter activity: Very high
- Sowing rate (kg/ha): 25-30
- Minimum rainfall (mms): 500+ or irrigation

\* Subject to management and climatic conditions

\*\* 1= Susceptible 9 = Resistant

### Animal safety

Recommended for:

Dairy

Beef

Sheep

# RAMPAGE

## ANNUAL RYEGRASS

### BENEFITS

- › Very fast establishment with strong cool season performance
- › Holds on well into late spring, early summer
- › High tetraploid forage quality with excellent palatability and grazing utilisation
- › Late heading maintaining forage quality into late spring to maximize animal performance
- › Ideal as a winter feed and for all livestock types
- › High yielding, high quality silage option
