

REAPER

RED CLOVER

A high yielding, large leafed, semi-erect growing diploid red clover which is suitable for grazing and for hay and silage. Reaper is a very palatable variety, with fine stems which are less stalky than traditional red clovers and is low in oestrogen levels. It has good disease resistance and strong persistence.

The palatable and
persistent all rounder

Agronomic traits

- Leaf size: Large
- Persistence (years): 3-4 *
- Minimum rainfall (mms): 700+ or irrigation
- Winter activity: High
- Flowering date: Early-mid
- Sowing rate (kg/ha): 4-6

* Subject to management and climatic conditions

Animal safety

Recommended for:

Dairy

Beef

Sheep

REAPER

RED CLOVER

BENEFITS

- › Competitive and compatible in mixes
- › High yielding, with strong winter activity
- › Very good disease resistance, including sclerotinia and rust
- › More tolerant of clover root weevil than white clover
- › Very good persistence, even under close sheep grazing than white clover
- › Low oestrogen levels
