

DASH

ANNUAL RYEGRASS

A fast establishing, late heading, densely tillered and high yielding tetraploid annual ryegrass with big bold leaves.

Dash is quick out of the ground, with rapid re-growth and excellent winter growth activity. Dash holds on well into the spring, offering great flexibility for late season fodder conservation or extra grazings.

Dash
Annual Ryegrass

Agronomic traits

- **Heading date:** Late
- **Persistence:** 8-10 months*
- **Growth peak:** autumn-spring
- **Sowing season:** autumn
- **Sowing rate:** 25-30 (kg/ha)

*Subject to climate, insect pest pressure and management
**1 = Susceptible, 9 = Resistant

Benefits

- A specialist winter feed which is also great for high quality silage production
- Very fast establishing
- Very high winter growth
- Late heading for carrying pasture quality longer into spring
- Very palatable
- Excellent disease resistance

PERFORMANCE

Later heading - better late season forage quality and yield when it counts
