

Cropmark
Kainui
 Cocksfoot

BENEFITS

- ▶ Latest genetics
- ▶ Higher yields across all seasons
- ▶ Finer, softer, more ryegrass
- ▶ Better compatibility within pasture mixes with ryegrass

DESCRIPTION

A newly released NZ bred cocksfoot which was bred for high yields, good compatibility within pasture mixes, and strong root development for summer dry tolerance.

Has high tiller density, and soft ryegrass-like leaves. Very good disease resistance. Well suited for inclusion in pasture mixes or as a specialist pasture in summer dry areas.

AGRONOMIC TRAITS

PERSISTENCE	DISEASE RESISTANCE	WINTER ACTIVITY	GROWTH PEAK	TILLER DENSITY	SOWING RATE
5+ YEARS	VERY GOOD	MEDIUM - HIGH	SPRING - SUMMER	HIGH	MIXES: 1-2KGS/HA ALONE: 4-6KG/HA

PERFORMANCE

Strong comparative growth across all seasons, with excellent cool season activity.

HUNDREDIZED YIELD RESULTS - RESULTS - CROPMARK COCKSFOOT TRIAL, RAKAIA
