

Q31

LUCERNE

Q31 is a dual purpose grazing and cutting, more winter dormant lucerne best suited to the cooler parts of New Zealand. It has strong spring and summer seasonal production with excellent leaf retention and large leaf size. Q31 is finely stemmed and densely tillered producing high quality feed for all pastoral livestock types. Q31 has good tolerance to many of the common leaf and stem diseases and also to the root and crown diseases that lucerne can be susceptible to.

Agronomic traits

- › Winter dormancy: 3
- › Persistence: 5+ years
- › Suitability: Grazing and cutting
- › Pest & disease tolerance: Strong

Pest & disease resistance

- › Bacterial Wilt: Resistant
- › Fusarium Wilt: Resistant
- › Phytophthora Root Rot: Resistant
- › Spotted Alfalfa Aphid: Resistant
- › Blue Alfalfa Aphid: Moderate resistance
- › Stem Nematode: Moderate resistance

Animal safety

Recommended for:

Dairy

Beef

Sheep

Deer

*Subject to climate, insect pest pressure and management
**1 = Susceptible, 9 = Resistant
