

GERONIMO

THE RELIABLE ALL ROUNDER

Geronimo is a thoroughly proven and consistently high yielding mono-germ fodder beet that sits approximately 50% above the ground.

With a dry matter content of 16-18%, Geronimo has a yellow-orange tankard shaped bulb, and has very good tolerance to the diseases rhizomania, ramularia and some forms of mildew. The crop can be grazed in-situ, or lifted and fed whole or chopped.

Agronomic traits

- Bulb percentage above ground: +/- 50%
- Dry matter percentage: 16-18% *
- Bolting tolerance: Very good *
- Disease tolerance: Very good *
- Maturity (days to graze): 180+
- Sowing season: spring
- Sowing rate (seeds/ha): 80,000 - 100,000

*Subject to climate, insect pest pressure and management

Benefits

- Reliable even germination
- Large top growth with excellent green leaf retention late into season
- Very good bolting tolerance
- Suitable for sheep, cattle and deer for grazing in-situ or lifted and fed out later
- Seed is pelletised with world leading technology and coated with insecticide and/or fungicide only options
- Available in handy 50,000 seed boxes

Geronimo is a thoroughly proven and high yielding mono-germ fodder beet. A high quality winter feed, with medium dry matter content, capable of producing high volumes for grazing in situ, lifted or as stored feed.
