MANTRA

THE HIGH YIELDING LARGE LEAFED CLOVER

A large leafed, mid-flowering white clover, with high stolon density and a medium growing point to enable better competition with grass in pasture swards. Mantra has high yields with strong winter and early spring growth, very good persistence and good tolerance to sclerotinia. Best suited to rotational grazing.

A standout performer in a dariy system providing high quality feed and fixing valuable nitrogen back into the pasture system. Around 4% of white clover's yield is returned back into the system as "free" nitrogen annually.

Cropmark Mantra Large Leafed White Clover

Agronomic traits

- **Leaf size:** Very large
- **Persistence (years):** 5+ *
- **Winter activity:** High
- **Flowering date:** Early - mid
- **Growth peak:** spring to autumn
- **Sowing rate (kg/ha):** 4-6

*Subject to climate, insect pest pressure and management

Benefits

- Highly competitive in grass swards
- High yielding, with strong winter, early spring growth
- High stolon density and stolon length
- Highly palatable with finer stems
- Very good disease resistance including against sclerotinia and rust
- Very good persistence, even under close sheep grazing

Mantra is perfect for farmers looking for a highly productive white clover that offers excellent grazing persistence.
